Math 10/11 Enriched: Section 7.1 Graphing Circles and Ellipses

1. Given each equation below, graph it on the grid provided:

Copyright All Rights Reserved at Homework Depot www.BCMath.ca

- 2. Given that the endpoints of a diameter are (-3,11) and (8,-7), what is the equation of the circle?
- 3. Given the equation of the ellipse $3x^2 8x + 2y^2 + 10y = 20$, conver it to the form of $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$
- 4. Which of the following has a greater area and by how much? $(x+2)^2 + (y-3)^2 = 25$ or $\frac{x^2}{25} + \frac{y^2}{36} = 1$?
- 5. If "P" is any point on the ellipse $\frac{x^2}{9} + \frac{y^2}{4} = 1$, "Q" has coordinates $(\sqrt{5}, 0)$ and "S" has coordinates $(-\sqrt{5}, 0)$, then find PS + PQ.
- 6. Find the distance between the foci of the conic section whose equation is: $4x^2 + 8x + 13 = 3y^2 18y$
- 7. For what values of "k" will the following equation be an ellipse? $3x^2 + 15xy + ky^2 = 1025$
- 8. What are the coordinates, in the form of (x,y) of the vertex of the given conic section that is farthest from the origin? $\frac{(x+2)^2}{16} + \frac{(y-5)^2}{36} = 1$
- 9. What are the coordinates of the point on the grap of $x^2 + y^2 = 1$ that is nearest to (3,4)?

- 10. The circle defined by the equation $(x+4)^2 + (y-3)^2 = 9$ is moved horizontally until its centre is on the line x = 6. How far does the centre of the circle move?
- 11. What are the coordinates of the point "P" on the lower half of the graph of the ellipse $\frac{x^2}{4} + \frac{y^2}{9} = 1$ for which $\angle AOP$, determined by points A(2,0), O(0,0), and P, has a measure of 60° ?
- 12. What is the area of the shape bounded by the curve: $4x^2 8x + y^2 + 4y = 0$?
- 13. Square OABC is drawn with vertices as shown. Find the equation of the circle with the largest area that can be drawn inside the square. Exactly Security 2014

- 14. What is the area of the ellipse defined by $\frac{(x+3)^2}{16} + \frac{(y-4)^2}{25} = 1$
- 15. A point moves so that the sum of its distances from (-2, -4) and (2, -4) is 16. Find the coordinates of the endpoint of the minor axis that is below the major axis.

- 16. Consider the graph of $\frac{x^2}{25} + \frac{y^2}{16} = 1$. A circle is graphed which contains the endpoint of the major axis and the highest endpoint of the minor axis. Find the center of the circle.
- 17. The graph of $2x^2 + xy + 3y^2 11x 20y + 40 = 0$ is an ellipse in the first quadrant of the xy-plane. Let "a" and "b" be the maximum and minimum values of $\frac{y}{x}$ over all points (x,y) on the ellipse. What is the value of a+b?
- 18. What is the greatest possible value of "a" for which there is at least one real solution (x,y) to the system $x^2 + y^2 = 1$ and $x^2y^2 = a$?
- 19. In the coordinate plane, any circle which passes through (-2,-2) and (1,4) cannot also pass through (x,2006). What is the value of "x"?
- 20. Challenge: The circles $(x-p)^2 + y^2 = r^2$ has centre "C" and circle $x^2 + (y-p)^2 = r^2$ has centre "D". The circles intersect at two distinct points "A" and "B", with x-coordinates "a" and "b", respectively. Euclid
 - a. Prove that a+b=p and $a^2+b^2=r^2$
 - b. If "r" is fixed and "p" is then found to maximize the area of quadrilateral CABD, prove that either "A" or "B" is the origin.
 - c. If "p" and "r" are integers, determine the minimum possible distance between "A" and "B". Find positive integers "p" and "r", each larger than 1, that give this distance.

4-5. What are the coordinates of the point on the graph of $x^2 + y^2 = 1$ that is nearest to (3,4)?

$55^{th} AMC 12 B = 2004 5$

21. The graph of $2x^2 + xy + 3y^2 - 11x - 20y + 40 = 0$ is an ellipse in the first quadrant of the *xy*-plane. Let *a* and *b* be the maximum and minimum values of $\frac{y}{x}$ over all points (x, y) on the ellipse. What is the value of a + b?

(A) 3 (B) $\sqrt{10}$ (C) $\frac{7}{2}$ (D) $\frac{9}{2}$ (E) $2\sqrt{14}$

PART B

- 1. The points A(-8, 6) and B(-6, -8) lie on the circle $x^2 + y^2 = 100$.
 - (a) Determine the equation of the line through A and B.
 - (b) Determine the equation of the perpendicular bisector of AB.
 - (c) The perpendicular bisector of AB cuts the circle at two points, P in the first quadrant and Q in the third quadrant. Determine the coordinates of P and Q.
 - (d) What is the length of PQ? Justify your answer.

- A point moves so that the sum of its distances from (-2, -4) and (2, 4) is 16. Find the coordinates of the endpoint of the minor axis that is below the major axis. (4\sqrt{55}/5, -\frac{2\sqrt{55}}{5})
- 17. Consider the graph of $\frac{x^2}{25} + \frac{y^2}{16} = 1$. A circle is graphed which contains the endpoints of the major axis and the highest endpoint of the minor axis. Find the center of this circle. $(0, -\frac{9}{2})$
- 2. In the diagram, the circle $x^2 + y^2 = 25$ intersects the x-axis at points A and B. The line x = 11intersects the x-axis at point C. Point P moves along the line x = 11 above the x-axis and AP intersects the circle at Q.
 - (a) Determine the coordinates of P when $\triangle AQB$ has maximum area. Justify your answer.
 - (b) Determine the coordinates of P when Q is the midpoint of AP. Justify your answer.
 - (c) Determine the coordinates of P when the area of $\triangle AQB$ is $\frac{1}{4}$ of the area of $\triangle APC$. Justify your answer.

Challenge COMC #4

- 4. A cat is located at C, 60 metres directly west of a mouse located at M. The mouse is trying to escape by running at 7 m/s in a direction 30° east of north. The cat, an expert in geometry, runs at 13 m/s in a suitable straight line path that will intercept the mouse as quickly as possible.
 - (a) If t is the length of time, in seconds, that it takes the cat to catch the mouse, determine the value of t.
 - (b) Suppose that the mouse instead chooses a different direction to try to escape. Show that no matter which direction it runs, all points of interception lie on a circle.
 - (c) Suppose that the mouse is intercepted after running a distance of d_1 metres in a particular direction. If the mouse would have been intercepted after it had run a distance of d_2 metres in the opposite direction, show that $d_1 + d_2 \ge 14\sqrt{30}$.

Contest	Year	Number	Answer
Amc 12	2002	18	
Amc 12	2005b	14	
CNML 2005/2006	Contest #5	#5	
CNML 2005/2006	Contest #6	#5	

5-5. In the coordinate plane, any circle which passes through (-2,-2) and (1,4) cannot also pass through (x,2006). What is the value of x?

18. Let C_1 and C_2 be circles defined by

$$(x-10)^2 + y^2 = 36$$

and

$$(x+15)^2 + y^2 = 81,$$

respectively. What is the length of the shortest line segment \overline{PQ} that is tangent to C_1 at P and to C_2 at Q?

(A) 15 (B) 18 (C) 20 (D) 21 (E) 24

$$55^{th} AMC 12 B 2004 5$$

- 21. The graph of $2x^2 + xy + 3y^2 11x 20y + 40 = 0$ is an ellipse in the first quadrant of the *xy*-plane. Let *a* and *b* be the maximum and minimum values of $\frac{y}{x}$ over all points (x, y) on the ellipse. What is the value of a + b?
 - (A) 3 (B) $\sqrt{10}$ (C) $\frac{7}{2}$ (D) $\frac{9}{2}$ (E) $2\sqrt{14}$
- 14. A circle having center (0, k), with k > 6, is tangent to the lines y = x, y = -x and y = 6. What is the radius of this circle?
 - (A) $6\sqrt{2} 6$ (B) 6 (C) $6\sqrt{2}$ (D) 12 (E) $6 + 6\sqrt{2}$
- 21. The graph of $2x^2 + xy + 3y^2 11x 20y + 40 = 0$ is an ellipse in the first quadrant of the *xy*-plane. Let *a* and *b* be the maximum and minimum values of $\frac{y}{x}$ over all points (x, y) on the ellipse. What is the value of a + b?
 - (A) 3 (B) $\sqrt{10}$ (C) $\frac{7}{2}$ (D) $\frac{9}{2}$ (E) $2\sqrt{14}$

2. (a) The circle defined by the equation $(x+4)^2 + (y-3)^2 = 9$ is moved horizontally until its centre is on the line x = 6. How far does the centre of the circle move?

- 2. In the diagram, the circle $x^2 + y^2 = 25$ intersects the *x*-axis at points *A* and *B*. The line x = 11intersects the *x*-axis at point *C*. Point *P* moves along the line x = 11 above the *x*-axis and *AP* intersects the circle at *Q*.
 - (a) Determine the coordinates of P when $\triangle AQB$ has maximum area. Justify your answer.
 - (b) Determine the coordinates of P when Q is the midpoint of AP. Justify your answer.
 - (c) Determine the coordinates of P when the area of $\triangle AQB$ is $\frac{1}{4}$ of the area of $\triangle APC$. Justify your answer.
- 1. The points A(-8, 6) and B(-6, -8) lie on the circle $x^2 + y^2 = 100$.
 - (a) Determine the equation of the line through *A* and *B*.
 - (b) Determine the equation of the perpendicular bisector of AB.
 - (c) The perpendicular bisector of *AB* cuts the circle at two points, *P* in the first quadrant and *Q* in the third quadrant. Determine the coordinates of *P* and *Q*.
 - (d) What is the length of *PQ*? Justify your answer.
- 9. The circle $(x p)^2 + y^2 = r^2$ has centre *C* and the circle $x^2 + (y p)^2 = r^2$ has centre *D*. The circles intersect at two *distinct* points *A* and *B*, with *x*-coordinates *a* and *b*, respectively.
 - (a) Prove that a + b = p and $a^2 + b^2 = r^2$.
 - (b) If *r* is fixed and *p* is then found to maximize the area of quadrilateral *CADB*, prove that either *A* or *B* is the origin.
 - (c) If *p* and *r* are integers, determine the minimum possible distance between *A* and *B*. Find positive integers *p* and *r*, each larger than 1, that give this distance.

7. Each of the points P(4, 1), Q(7, -8) and R(10, 1) is the midpoint of a radius of the circle C. Determine the length of the radius of circle C.

Problem 4. Find a point (u, v) on the ellipse with equation $x^2 + 2y^2 = 1$ such that u and v are rational, and each, when expressed as a reduced fraction, has a denominator greater than 1000. Hint: Consider the line with slope m that passes through the point (-1, 0).

Substitute (x + 1)m for y in $x^2 + 2y^2 = 1$. After a little simplification, we obtain

$$(1+2m^2)x^2 + 4m^2x + 2m^2 - 1 = 0.$$

Now we could use the Quadratic Formula, or even, unusually, factorization, to solve for x. But this is not necessary. For the product of the roots is $(2m^2 - 1)/(1 + 2m^2)$, and -1 is one of the roots, so the other root is given by $u = (1 - 2m^2)/(1 + 2m^2)$. The corresponding v is given by $v = 2m/(1 + 2m^2)$.

Note that if m is rational, then u and v are rational. (Parenthetically, if (u, v) lies on the ellipse, with u and v rational, with $u \neq -1$, then the slope of the line joining (-1, 0) to (u, v) is rational. So all rational points (u, v) on the ellipse except for (-1, 0) can be obtained through this process with m rational.)

Now everything is easy. Take for example m = 100. That gives u = 19999/20001 and v = 200/20001.

Comment. More interestingly, the same process can be used with the circle $x^2 + y^2 = 1$. We find that apart from (-1, 0), all the rational points (u, v) on the unit circle are given by $u = (1 - m^2)/(1 + m^2)$, $v = 2m/(1 + m^2)$, where m ranges over the rationals.

What are the coordinates, in the form (x,y), of the vertex of the given conic section that is farthest from the origin? $\frac{(x+2)^2}{16} + \frac{(y-5)^2}{36} = 1$

2. (a) The circle defined by the equation $(x + 4)^2 + (y - 3)^2 = 9$ is moved horizontally until its centre is on the line x = 6. How far does the centre of the circle move?

What is the area of the ellipse defined by $\frac{(x+3)^2}{16} + \frac{(y-4)^2}{25} = 1$?

What is the area of the shape bounded by the curve: $4x^2 - 8x + y^2 + 4y = 0$?

If P is any point on the ellipse $\frac{x^2}{9} + \frac{y^2}{4} = 1$, Q has coordinates $(\sqrt{5}, 0)$ and S has coordinates $(-\sqrt{5}, 0)$, then find PQ + PS. ₆

Find the distance between the foci of the conic section whose equation is:

$$4x^2 + 8x + 13 = 3y^2 - 18y \qquad 2\sqrt{21}$$

6. For what values of k will the following eq determine an ellipse?

$$3x^2 + 15xy + ky^2 = 1025$$
 $k > \frac{75}{4}$

10. A point moves so that the sum of its distant from (-2, -4) and (2, 4) is 16. Find the coordinates of the endpoint of the minor at that is below the major axis. $\left(\frac{4\sqrt{55}}{5}, -\frac{2\sqrt{55}}{5}\right)$
