HW Section 10.2 Finding Patterns in a Table of Values

1. The perimeter of a square is equal to the side length multiplied by 4. Complete the following table of values:

<i>Perimeter (cm)</i>				84
<i>Side Length</i>	4	6.5	21	

2. The following table is for the relationship between the side length of a hexagon and its perimeter. Complete the TOV:

<i>Perimeter (cm)</i>				72
<i>Side Length</i>	3	7	-5	

3. Given that the relationship is supposed to be linear, which row does not belong in the table of values? Which value would you change to make it into a linear relationship?

5. Given the figures below, derive a formula for the numbers of small little squares (S) vs the figure number (N)

Figure 1

Figure 2

Figure 3

a) Derive a formula for the total number of possible squares (T) vs the figure number (N)?

b) Make a table of values and then graph it. Is this a linear relationship?

6. Challenge: Suppose you connect the dots next to each other and count the number of little triangles. Make a table of values for the number of dots and the number of little triangles. Is this relationship linear?
